

**GENERALIZED SEQUENCE OF VEGETATION  
FROM THE NORTH POLE TO THE EQUATOR**

(on a hypothetical uniform surface,  
eliminating differences in elevation)

There is a more or less wide zone of transition between each major vegetation type. Note also that the spacing of latitude lines has been foreshortened in order to expand the low and middle latitudinal areas.

REPEAT THE SAME SEQUENCE  
OF VEGETATION IN THE  
SOUTHERN HEMISPHERE
